Efficacy of SureGuard and SureGuard + Glyphosate

Hannah Mathers and Luke Case

Three trials were initiated to determine differences between applications of SureGuard vs. SureGuard + glyphosate. The glyphosate used in this study was Roundup Pro (Monsanto Corp., St. Louis, MO). Rates for SureGuard and Roundup Pro were 12 oz/ac and 24 oz/ac, respectively. The trial sites included a gravel area in the nursery area of the main campus of The Ohio State University, a nursery field area which contained one Acer rubrum per plot, and a bare field area. The gravel and nursery field were both treated on May 28, 2014 and the bare field was sprayed on June 13, 2014. Treatments were applied with a CO₂ backpack sprayer delivering 25 gal/ac.
